Abstract

A studies of fifteen groundwater samples from different sites in sailu was carried out. The water quality parameter like temperature, pH, electrical conductivity, total dissolved solids (TDS), total alkalinity (TA), total hardness (TH), chlorides (Cl⁻), Calcium (Ca²⁺), Magnesium (Mg²⁺), and dissolved oxygen (DO) were studied and out come of the results were discussed.

Key words: A studies, ground water, Sailu.

INTRODUCTION

Sailu is considered to be the oldest and religious city in parbhani district of Marathwada region in Maharashtra, Sailu city is situated near Dudhana river. A Famous Temple of "Keshavraj Babasaheb Maharaj" is situated in middle of sailu city. Who was Guru of Shirdis Sai baba.

The residents of Sailu tehsil usually use water from bore-well for drinking and domestic purposes. There is a huge variation in the concentration of different species due to factors like depth, different land, under groundwater conditions, rain conditions etc. The present work attempts to evaluate the quality of groundwater in sailu Tehsil of Parbhani district for potability.

Material and Methods

In the Present study thirty groundwater (borewell) samples were collected from different sites of Sailu tehsil in brown glass bottles with necessary precautions and preserved as per the recommended procedures.

All the chemicals used were of AR grade, glass ware used were of 'A' grade. Double distilled water was used through out the work to prepare standard solution²
